Re: Project 4569 Progress

Dear Ms. Kavanagh,

We have completed OECD 201, OECD 202 and OECD 203 Toxicity tests on your product "VGP #2." The result of these assays was that the material is not acutely toxic to algae, *Daphnia* (freshwater invertebrates) or minnows (freshwater fish) at concentrations of 1000 mg-L⁻¹, which is ten times greater than the usual limit tests specified by these methods.

We anticipate completing the entire project and producing the final report before the end of January.

Sincerely yours,

Todd O. Stevens, Ph.D
