

## **OVERVIEW**

The Q-Flex<sup>™</sup> modem embodies a new concept in satellite modem technology - a flexible software-defined modem that does what you want, now and in the future.

The Q-Flex<sup>™</sup> modem's flexible hardware platform provides IF and L-band operation in one unit. While its powerful processor makes it ideal for handling IP traffic, the Q-Flex™ modem can be fitted with virtually any type of terrestrial interface and will operate at data rates up to 160Mbps.

Flexible pricing is achieved by enabling only the features you need at any time. Futureproofing is assured by convenient software upgrades via Ethernet or a memory stick.

## **Advanced Bandwidth-Efficient Features**

The Q-Flex<sup>™</sup> modem supports the most powerful bandwidth-saving technology available. Paired Carrier™ overlays transmit and receive carriers reducing satellite bandwidth by 50% (using ViaSat's patented PCMA technology). Both DVB-S2, renowned for its robustness and bandwidth efficiency, and its successor, DVB-**S2X** are supported.

FastLink™ low-latency LDPC is optimised for latency-sensitive applications while giving coding gain that is close to the theoretical limits.

Bandwidth-saving IP features include acceleration and header and payload compression.

# **FEATURES**

- Dual IF/L-band operation
- Data rates to 160Mbps
- ➤ XStream IP™ is an integrated suite of advanced IP optimization & traffic management features including TCP acceleration, header & payload compression, dynamic routing, traffic shaping, encryption & ACM
- DVB-S2X, FastLink™ LDPC & TPC
- Terrestrial interfaces include Ethernet & optical Ethernet, EIA-530, G.703, ASI, OC-3 & STM-1
- Optimized spectral roll-offs, including 5%
- Paired Carrier™ carrier overlay
- LinkGuard™ signal-under-carrier interference detection
- Built-in spectrum & constellation monitors
- New! DVB-S2X!
- New! DVB Carrier ID! Fully compliant with **DVB-CID** standard!
- New! Secure AAA RADIUS login using your normal company network login credentials!

# **Markets and Applications**

- IP trunking and IP backhaul
- Corporate networking
- Mobile/G.703 backhaul
- Disaster recovery
- Maritime communications
- Satellite news gathering
- High-speed trains

A Teledyne Technologies Company

| Paired Carrier™ Option  |  |  |  |
|---|--|--|--|
| Paired Carrier™   | Transmit and receive carriers are overlaid in the same space segment. Echo cancellation techniques are used to cancel the unwanted transmit carrier leaving the wanted receive carrier |  |  |
| Paired Carrier™ data rate options (30kHz to 54MHz occu- pied bandwidth) | 256kbps, 512kbps, 1024kbps,<br>2.5Mbps, 5Mbps, 10Mbps, 15Mbps,<br>20Mbps, 25Mbps, 30Mbps, 40Mbps,<br>50Mbps, 60Mbps, 80Mbps, 100Mbps<br>and 160Mbps traffic rate                       |  |  |
| Power<br>Asymmetry  | -10dB to +10dB   |  |  |
| Symbol Rate<br>Asymmetry  | Up to 12:1   |  |  |
| Eb/No<br>Degradation  | Typically 0.1dB to 0.5dB;<br>up to 0.7dB for 16QAM/16APSK;<br>up to 1dB for 32APSK   |  |  |
| Mobile<br>Operation   | Uses GPS data to continually recalculate position relative to satellite, allowing uninterrupted operation in mobile environments anywhere in satellite footprint                       |  |  |

| <b>ClearLinQ™</b> | <sup>1</sup> Tx Adapt | ive Predistorter |
|-------------------|-----------------------|------------------|
|-------------------|-----------------------|------------------|

Corrects for linear & non-linear distortion in the RF chain (i.e. amplifier and transponder). Applicable to all FECs and modulations. Maximises amplifier linear output power; minimises required back-off. Up to 2dB performance gain

#### **DVB-S2X Rx Adaptive Equaliser**

Corrects for slope on the carrier and group delay (typically found at transponder edges, causing inter-symbol interference). The 9-tap Rx equaliser is provided as standard; automatically switched on above 10Msps

## **DVB Carrier ID Option (ETSI TS 103 129)**

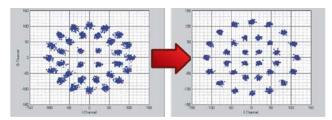

Supports the identification of interfering carriers. Allows identification of individual modem carriers by superimposing a low-power CID waveform onto the carrier with negligible degradation. The CID waveform contains a unique Carrier ID and other identity information. A carrier monitoring system is required to decode CID waveforms

#### TPC Performance Eb/No (dB) at BER 5E-8

Built-in Spectrum Analyser showing LinkGuard™ Signal-Under-Carrier interference detection without/with interferer present.

3 OF 5 210058 Issued 5 March 2015

|   | Option | Description   | Fully configurable - pay only for what you need!   |  |  |  |
|---|--------|---|--|--|--|--|
| Base Modem  | 1      | 4.8kbps to 2.048Mbps Closed Network (+ ESC) modem with two Gigabit Ethernet RJ45s for M&C and traffic respectively; Ethernet bridge, static routing; IPv4/IPv6; IEEE 802.1p QoS; IEEE 802.1q VLAN; 10k by IF operation 50 to 90MHz & 100 to 180MHz  L-band operation 950 to 2150MHz; high-stability 10MHz reference; FSK  TPC: BPSK, QPSK, OQPSK, 8PSK, 8QAM and 16QAM; to 60Mbps subject to prevailing modem data rate LinkGuard™: Signal-under-carrier interference detection web spectrum graph showing received spectrum an interference underneath the received carrier while on traffic; automated alarm when interference rises above threshold; supported for FastLink™, TPC and DVB-S2X for all modulations  AUPC: Automatic Uplink Power Control  Web browser monitoring tools: Spectrum display, constellation monitor, TCP/IP throughput Internal Bit Error Rate Tester (BERT): For non-DVB-S2/DVB-S2X operation only  TCP/IP Packet Generator/Analyser: Generates and analyses TCP & UDP packet streams, allowing modem modem IP testing without any other equipment |  |  |  |  |
| Tx-only   |        | Transmit functions only   |  |  |  |  |
| Rx-only   |        | Receive functions only  |  |  |  |  |
| Data Rate   |        | 5Mbps data rate: Extends  | base operation to 5Mbps  |  |  |  |
|   |        | 10Mbps data rate: Extend  | ls 5Mbps operation to 10Mbps   |  |  |  |
|   |        | 25Mbps data rate: Extend  | Is 10Mbps operation to 25Mbps  |  |  |  |
|   |        | 60Mbps data rate: Extend  | ls 25Mbps operation to 60Mbps  |  |  |  |
|   |        | 100Mbps data rate: Exter  | ds 60Mbps operation to 100Mbps (FastLink™, DVB-S2 & DVB-S2X only)  |  |  |  |
|   |        | 160Mbps data rate: Exter  | ds 100Mbps operation to 160Mbps (DVB-S2 & DVB-S2X only)  |  |  |  |
| XStream IP™   |        |   | S CIR/BIR/priority settings for IP streams classified by VLAN ID, IP address, Diffserv class, S EXP field & MPEG2 transport stream PID   |  |  |  |
|   |        | Header Compression: IP.   | /UDP/TCP/RTP packet header compression (RFC 3095) plus Ethernet header compression   |  |  |  |
|   |        | Payload Compression: T  | CP/UDP packet payload compression using the Deflate algorithm (RFC 1951)   |  |  |  |
|   |        | Dynamic Routing: RIP, C   | SPF and BGP  |  |  |  |
|   |        | TCP Acceleration: Up to   | 10,000 concurrent accelerated TCP connections to 100Mbps subject to prevailing data rate   |  |  |  |
|   |        | Replaces standard modern  | er Login: Authentication, Authorisation & Accounting. Greater access control & accountability. I login with user's personal company network login credentials  |  |  |  |
|   |        |   | ase note that AES-256 Encryption (TCP/IP packet payload encryption using AES with 256-bit <b>Q-FlexE</b> model only. The Q-FlexE is identical to the standard Q-Flex in every other respect  |  |  |  |
| XStream IP™ DVB -S2   |        | Protocol (PXE), MPE or UI   | on: Encapsulation of IP packets and Ethernet frames over DVB-S2 using Paradise XStream .E  |  |  |  |
| Provided as stand-<br>ard as part of DVB-                             |        | ACM: DVB-S2/DVB-S2X A   |  |  |  |  |
| S2 & DVB-S2X options  |        | VCM: Allows either two AS requires Quad ASI hardwa  | SI streams, or one ASI stream and one IP stream, to be multiplexed onto a single carrier; re option  |  |  |  |
| <b>DVB-S2X</b> To 160Mbps subject to prevailing                       |        | 8PSK, 8APSK, 16APSK, 3  | 62 QPSK, 8PSK, 16APSK & 32APSK Tx operation per EN 302 307-1.
